

CPD

“ I would recommend Eddie to any educators seeking to develop their teaching methodology with the confidence that they will receive instruction from a highly professional individual with a depth and breadth of technical and educational expertise.”

Stephen Stott,
Education Program Manager
Autodesk Inc.,
Europe, Middle East & Africa

“ You delivered the best inset experience I have ever received in twenty five years of teaching. Your video tutorials are superb, thanks. We will definitely be subscribing to your website.”

Steve Mylchreest,
Head of Design & Tech.
Perth Academy

COURSE CONTENTS

Introductory Demonstration

Course material with solutions

High quality teaching material

Discussion of methodologies

Both topics covered equally

MEASURED PERSPECTIVE & TANGENCY

Covering the requirements of both of these topics with discussion on appropriate content for the Higher GC course

Date : By arrangement

Time : Six hours

Venue : Your premises

Numbers : Maximum 20

Cost : £550 + travel

This one day course is aimed at Design & Technology teachers in High Schools who have never taught Graphic Communication to Higher level or who are in need of a refresher in these topics.

The cost includes teaching material used in the delivery of the course on the day which can be used for future learning and teaching in the centre. All courses are recorded live and provided in the form of video tutorial material to participants.

Bearing in mind that it is perfectly possible to negotiate content, shown in the panel on the left is the structure of a typical, one day, introductory course in Measured Perspective and Tangency.

Course Tutor, **Eddie Mack**, has over fifteen years experience teaching Design & Technology in both Secondary and Higher Education and will ensure you feel supported.

Participants can be assured of feeling they made the best use of their valuable CPD time during the course and in the vital weeks after when they are able to play back the day's sessions while consolidating their learning.
